2. Hazards Identification

HAZARDS OVERVIEW:

There are no chemical hazards from these sheets in solid form.

Machining, grinding, flame cutting, or welding of the flashing will put contaminants, primarily copper and lead, in the air.

Fumes and dusts from the flashing irritate the nose and throat. If too much fume is inhaled, it will cause a sweet or metallic taste in the mouth. High Concentrations of the fumes can also cause metal fume fever, which resembles the flu.

Breathing or swallowing lead dust or fume from the casting can result in lead poisoning. The effects are fatigue, headache, loss of appetite, aching bones and muscular weakness. Overexposure for a long time can cause kidney damage, nervous system damage, reproductive effects, and anemia.

Because of this potential hazard from metal dust and fumes, grinding, welding operations, etc., should be done under local exhaust ventilation. If ventilation is not adequate, wear a NIOSH approved dust and fume respirator. In addition, good hygiene practices should be followed. Smoking should not be allowed in lead handling areas. Wash hands thoroughly before eating. Keep work area clean.

CARCINOGEN CLASSIFICATION

Ingredient	OSHA	NTP	IARC	TARGET ORGAN
Lead	N	N	2B	Lung, stomach, kidney

Y - Listed as a human carcinogen; N - Not listed as a human carcinogen.

Code for IARC (International Agency for Research on Cancer) evidence for human carcinogenicity:

1 = positive; 2A = probable; 2B = possible; 3 = not classified; 4 = probably negative.

Elements having a listed percentage greater than zero will be present in all grades. Those having a value of "0" may not be present in certain grades.

*This constituent, a toxic chemical, makes this product subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR Part 372.
