**RE: NEW STAINLESS STEEL CORNERS AND END DAMS**

To Whom It May Concern:

Hohmann & Barnard will be discontinuing the Flex-Flash® Inside Corners, Outside Corners and End Dams and replacing them with a Type 304 Stainless Steel soldered version.

The reason for the update is due to the fact that many end users were finding the 60 mil thickness was affecting their mortar joint thickness. The Stainless Steel soldered accessories will be made from 26 ga sheet which is considerably thinner. The price will remain the same or become less expensive.

Sincerely,

**Ronald Hohmann Jr.**
